Get exactly what you need to live life fully.

Sage Glendale proudly offers Assisted Living and Memory Care. Our goal is for you to live life as independently as you wish, with our caring team providing a helping hand if needed. Our expertly trained team is on-site 24/7 for support.

Assisted Living

Assisted living is chosen for different reasons and we know no two stories are exactly alike. Some individuals choose assisted living because they need a little help living life fully. Some crave social opportunities and the close comfort of friends. Others no longer want the responsibility of upkeep for their home, and want to benefit from others to cook, clean, do laundry and more. No matter your reason for a move to assisted living, you can find what you need here at Sage Glendale.

Memory Care

We know that living with memory loss due to dementia is challenging. We look past the disease and focus on the individual. By providing customized care that's exactly what someone needs to live safely and with dignity, and by getting to know residents personally, we can ensure that those in memory care at Sage Glendale will thrive while living life in our community. We'll ensure the support they need, along with fun, life-enriching opportunities every day.

Short-Term Stays

Want to try senior living on for size? When space allows, we're pleased to offer Short-Term Stays. A Respite Stay is a temporary solution that families use for many reasons – perhaps caregivers need to work or travel (or simply take a break). A Recovery Stay can be a good bridge between a medical procedure and a move back home. It's also the perfect way to try our community to determine if we're a good long-term fit for you or your loved one.

Short-term stays can range from a few days to a few weeks, to a few months. We'll provide a comfortable furnished room – or if the stay is longer-term – we'll move in your own bedroom furniture. During a respite stay, guests benefit from our caring staff, life-enriching activities, delicious meals and a safe and secure environment.
